Age / Sex: 28 YRS / MReferred by: Dr. Sachin Patil (MBBS)Reg. no.: 1116	Registered on : 25/11/2024 01:19 PM Collected on : 25/11/2024 Received on : 25/11/2024 Reported on : 25/11/2024 01:19 PM	

CLINICAL PATHOLOGY

TEST	VALUE	UNIT	REFERENCE
URINE CORTISOL	11	µg/24 hrs	

Physiological Basis:

Urinary free cortisol measurement is useful in the initial evaluation of suspected Cushing syndrome.

Interpretation

Increased in: Cushing syndrome, acute illness, stress. Not increased in: Obesity.

Comments

Urinary free cortisol is the initial diagnostic test of choice for Cushing syndrome. Not useful for the diagnosis of adrenal insufficiency. A shorter (12-hour) overnight collection and measurement of the ratio of urine-free cortisol to urine creatinine appears to perform nearly as well as a 24-hour collection for urine-free cortisol.
