### SEROLOGY & IMMUNOLOGY

#### BETA 2 GLYCOPROTEIN 1, ANTIBODIES

TEST	VALUE	UNIT	REFERENCE
BETA 2 GLYCOPROTEIN 1, IGG	3	SGU	
BETA 2 GLYCOPROTEIN 1, IGM	3	SMU	

**2006 International Consensus statement on Classification of definite APS**

CLINICAL CRITERIA	LABORATORY CRITERIA
Arterial/Venous thrombosis	Cardiolipin antibodies (aCL)
Fetal Loss	Beta 2 Glycoprotein 1 antibodies
Premature birth	Lupus Anticoagulant (LA)

**Note:**

APS is diagnosed if at least one laboratory criterion and one clinical criterion are met. For the laboratory criteria, they need to be observed on two or more separate occasions, with each test done at least 12 weeks apart.

**Comments**

This test checks for IgG antibodies to Beta-2 glycoprotein. Finding these antibodies can indicate a risk of blood clots in arteries and veins, as well as a higher chance of repeated miscarriages. The new International classification criteria for APS include Beta-2 glycoprotein for 2 key reasons namely:

- Beta-2 Glycoprotein antibodies maybe the only antibody present in 10% patients of Antiphospholipid syndrome (APS)
- Beta-2 Glycoprotein antibodies are highly specific for APS unlike Anticardiolipin antibodies which may be positive in certain infectious diseases

**Indications**

- Clinical history suggestive of Arterial or venous thrombosis
- History of Recurrent fetal loss /Intrauterine growth restriction/ Premature birth

~~~ End of report ~~~

Mr. Sachin Sharma  
DMLT, Lab Incharge

Dr. A. K. Asthana  
MBBS, MD Pathologist

NOT VALID FOR MEDICO LEGAL PURPOSE

Work timings: Monday to Sunday, 8 am to 8 pm

Please correlate clinically. Although the test results are checked thoroughly, in case of any unexpected test results which could be due to machine error or typing error or any other reason please contact the lab immediately for a free evaluation.
