**SEROLOGY & IMMUNOLOGY**

TEST	VALUE	UNIT	REFERENCE
OCCULT BLOOD, STOOL	Absent		Absent

**Positive in:**

- Upper GI disease (peptic ulcer, gastritis, variceal bleeding, esophageal and gastric cancer)
- Lower GI disease (diverticulosis, colonic polyps, colorectal cancer, inflammatory bowel disease, vascular ectasias, hemorrhoids).

**Comments**

Although fecal occult blood testing is an accepted screening test for colorectal cancer, the sensitivity and specificity of an individual test are low. The usefulness of fecal occult blood testing after digital rectal examination is low. Quantitative fecal immunochemical test (FIT) is superior to gFOBT because there are no dietary and drug restrictions and it is more amenable to standardization and quality control.

**Note**

To avoid false negatives, patients should avoid taking vitamin C.

~~~ End of report ~~~

Mr. Sachin Sharma  
DMLT, Lab Incharge

Dr. A. K. Asthana  
MBBS, MD Pathologist

**NOT VALID FOR MEDICO LEGAL PURPOSE**

Work timings: Monday to Sunday, 8 am to 8 pm

Please correlate clinically. Although the test results are checked thoroughly, in case of any unexpected test results which could be due to machine error or typing error or any other reason please contact the lab immediately for a free evaluation.
